

Solution Brief

Caringo + Perfect Search

Boundless object storage paired with rapid enterprise search

Search billions of stored objects and return relevant content in seconds

“Perfect Search brings new search capabilities to the storage market never before offered. Others have provided the ability to search limited metadata, but no one has before offered a highly scalable, cost-effective solution that allows a user to search not only the catalog information, but also the actual contents of the files stored.”

Tim Stay
CEO
Perfect Search Corporation

Concerned about wasting time and money searching for data?

The Perfect Search Appliance (PSA) seamlessly integrates with object storage powered by Caringo, helping you find your stored data with speed, precision and relevance. Caringo and the PSA solution is designed to offer you an effective solution for indexing and finding the information you need when you need it - faster, more precisely, and cost-effectively than any other search solution.

Data access with precision and speed

As objects are stored using Caringo software, Perfect Search indexes the metadata and the content of each object as it is stored and allows you to have rapid access to any document, image, backup or file with precision and speed.

The PSA gives you a comprehensive view of your stored data and can retrieve contents in seconds, even over the largest object stores. Are you also concerned about the security of your data? Caringo helps ensure you maintain data security requirements with policy-based retention and selectable content control permitting only authorized users to reference, alter and delete data.

- ▶ Dramatically enhance productivity
- ▶ Reduced eDiscovery costs
- ▶ Reduced regulatory compliance costs
- ▶ Reduced energy consumption
- ▶ Reduced hardware replacement costs
- ▶ Consistent storage and retention policies

Perfect Search 
SPEED. PRECISION. PERFORMANCE.

The Perfect Search Appliance (PSA) paired with Caringo's Object Storage software

- ▶ Dramatically enhanced productivity—finding what's needed when it's needed
- ▶ Reduced eDiscovery and regulatory compliance costs with fast and accurate retrieval of required information
- ▶ Scalability that can result in a significant reduction of search-related hardware—energy and hardware replacement savings that also provide room to grow
- ▶ Consistent storage and retention policies without unnecessary costs or sacrificing flexibility

Instant access to data

How do you access and discover all of your data stored in your object storage? Finding information within 3TB of disk space can be difficult, no matter what you are searching for. Having no index creates an even greater challenge for you. Imagine how hard it could be when you are searching 12TB, 24TB or even 48TB. The PSA has the ability to look through the entire object storage cluster and give near-instant access to any of your files or objects within the object store. Perfect Search indexes the data, keeps track of the locators for each piece of your data, and then, when a search is complete, it provides hits as to where the query was found, enabling you to click through to the document. As a foundational storage tier, any x86 hardware running Caringo's Object Storage software provides access to your unstructured data for multiple applications, securing data in one place for risk and cost management and enhancing your discovery and decision-making capabilities. Scale at your own pace with Caringo's Object Storage software, ensuring a perfect balance between capacity and throughput thanks to a flexible, peer-scaling architecture.

Advanced search proficiencies

Find the information you need when you need it within object storage running Caringo software. Auto updates give you an 'always-current' index. The plug-n-search solution is designed to offer ease of installation and use and give you double the performance and double the capacity at a fraction of the cost of other far less effective solutions. Hyper-Federation through a master index provides a single search query across multiple applications. You can easily search content through a simple web interface, by keyword or metadata tag. The cost-effective high speed queries (up to 100 queries per second) help enhance productivity and scalability providing you with significant human capital, hardware and energy cost savings.

Fast, scalable search capabilities

Perfect Search's enterprise search technology can deliver fast, scalable search capabilities across your exponentially growing data sets. Patented software innovation enables your search with rapid speeds, requiring significantly less hardware and system resources, so you can quickly and cost-effectively access and use information from structured and unstructured data sets gathered from across the enterprise. By processing your content from multiple systems to create a single, optimized real-time incremental index, Perfect Search permits incredibly high-speed, latency-free search and data retrieval.

Perfect Search delivers a precise, scalable, and cost-effective enterprise search solution using Caringo's Object Storage software so you can find the information you need when you need it.

About Caringo

Caringo is the global leader in object storage solutions and developer of CASstor - software that enables massive scalability and future-proof accessibility of unstructured data. The company's field-proven technology utilizes commodity hardware to build robust and boundless storage solutions accessible via HTTP and integrated into market leading data management applications from CommVault and Symantec, among many others. CASstor enables cloud storage solutions, big data repositories and general storage infrastructure replacing NAS, tape and VTL. Companies of all sizes can now avoid vendor lock-in, reduce costs, and guarantee data accessibility for decades to come. Caringo has over 400 customers ranging from SMBs to Fortune 500 companies.

About Perfect Search

Perfect Search Corporation's patented technology delivers its customers the industry's fastest, most precise, most scalable, most cost-effective enterprise search technology. Offering both search engine SDK for OEM and search appliance solutions, Perfect Search enables enterprises to find the information they need when they need it.
