Caringo Launches Free Online, Third-Party Developer Program

Streamlined integration with CASTor in hours

AUSTIN, Texas, February 26, 2008 – Caringo Inc., a leading provider of content storage software that enables clustered storage for active and archive content, today unveiled the CaringoConnect Developer Program for software developers in the ISV, academic, systems integrator and Web 2.0 sectors. CaringoConnect is a dedicated web portal that streamlines the integration and validation process with Caringo CASTor for any organization delivering solutions that manage, store and archive digital content. It's as simple as writing to an Apache server and this program provides all the information and tools necessary to integrate and test with CASTor.

The number of companies, large and small, adopting CASTor continues to dramatically increase and includes some of the most respected names in industries around the globe. Organizations are producing unprecedented amounts of digital content and the program empowers application developers to quickly realize the benefits of working with a CASTor content storage cluster. This is an opportunity for all types of developers to get in early and leverage the building adoption curve of CASTor worldwide.

The new web-based program allows developers to register, obtain documentation, sample code and access an online CASTor cluster to test and validate the integration

and interoperability of their solution from any remote location. No complex hardware to bring in-house and configure, and no cumbersome API, just implement five simple methods of an open standard, test and you're ready to roll.

Interested software developers can learn more about Caringo's new web based program and register at www.caringo.com/partners.html.

About CASTor

CASTor is a scalable, high-performance software product that runs on standard, commodity server hardware enabling customers to implement content storage for a fraction of the price of proprietary CAS systems. CASTor is self-healing, managing and configuring, and requires no provisioning or downtime to add storage capacity in real time. With CASTor, an organization can store all of its active and archive content with guaranteed integrity and scale from 1terabyte to Petabytes – all while requiring minimal administration and seamless upgradeability. CASTor is a software solution that frees customers from the bonds of hardware lock-in and allows them to start with the right size storage cluster for their current business needs and grow as the business demands.

About Caringo

Caringo Inc. is a leading provider of content storage software and has re-imagined content addressed storage from the ground up with its flagship CASTor product. CASTor is third-generation technology that leverages the customer's choice of commodity hardware to implement robust storage clusters that dramatically improve the scope and economics of corporate content storage. Caringo makes content storage affordable, scalable, fast and easy. More information can be found at www.caringo.com.
