Caringo Expands European Market for CAS[®]Stor Single Tier Storage Environments

AUSTIN, Texas, December 7, 2007 – Caringo Inc., a leading provider of content storage software that enables a new paradigm in single tier ILM solutions, today announced the signing of a comprehensive reseller agreement with leading data management expert Databasement. The relationship continues to demonstrate Caringo’s acceptance and increasing traction in the European marketplace. This new agreement provides Caringo with further expansion throughout Belgium, Spain, Luxembourg and The Netherlands.

“In enterprise computing environments today there is an overwhelming need for managing, storing and archiving data in a way that offers the greatest simplicity, scalability and performance,” said Rob Christ, director and founder of Databasement. “With Caringo’s CAS[®]Stor, we can now offer these applications and more by protecting both active and archive content through a CAS solution that meets both compliance regulations and the needs of a company’s information lifecycle.”

Christ said that one of the most compelling aspects to the CAS[®]Stor solution is its ability to work on any hardware platform, which makes it an ideal solution for installations looking to leverage existing hardware purchases or for organizations wishing to develop a unique and comprehensive storage architecture.

“Customers throughout Europe have been early – and eager – adopters of our CAS[®]Stor software and created an increasing demand for storage infrastructures that make archiving more flexible and more efficient,” said Mark Goros, Caringo CEO. “Because of this success, we have turned to a leading system integrator, Databasement, to deploy our unique solution into computing environments throughout the European Union to better provide organizations with the best

method of storing mission-critical data across a single-tier storage environment that eliminates the need to separate active and archive content.”

Founded in 2001, Databasement is an ambitious data management service provider that focuses only on best-of-breed solutions that allow companies to meet their objectives more efficiently, offering the highest possible functionality against the very lowest total cost of ownership. High availability, elimination of backup and restore windows and integrated offsite replication are among the many advantages Databasement brings to the market with its custom-designed implementations.

CASStor is a scalable, high-performance and extremely cost-effective software product that runs on standard, commodity disk hardware for a fraction of the price of proprietary CAS systems. CASStor is self-healing, managing and configuring, uses no proprietary APIs, and requires no provisioning or downtime to add storage capacity in real time. With CASStor, an organization can store all of its active and archive content with guaranteed integrity and can scale the content store from 1.5 terabytes to Petabytes – all while requiring minimal administration and seamless upgradeability.

About Caringo

Caringo Inc. is a leading provider of content storage software and has re-imagined content addressed storage from the ground up with its flagship CASStor product. CASStor is third-generation technology that leverages the customer’s choice of commodity hardware to dramatically improve the scope and economics of corporate content storage. Caringo is founded on the operating principle based on Einstein’s belief that “Things should be made as simple as possible.” Rather than make CAS complex and expensive, Caringo makes it affordable, scalable, fast and easy.
